Course: Computational Linguistics 2 @ IIIT – Hyderabad
Instructors: Parameswari Krishnamurthy & Rajakrishnan Rajkumar

Project Submission Guideline

Organize your project into sections, including an abstract, introduction, methodology, results, discussion, conclusion, and references.

Abstract:

Write a concise abstract (usually around 200-250 words) summarizing your project's key objectives, methods, results, and conclusions.

Introduction:

- Introduce the research problem or question.
- Provide a literature review to establish context.
- Clearly state your research objectives and hypotheses.

Methodology:

- Describe the research methods, including data collection and experiments
- Explain your approach and justify why it's suitable for your research.

Results:

- Present the results of your research.
- Use figures, tables, and charts to illustrate your findings.
- Provide statistical analyses if applicable.

Discussion:

- Interpret the results and discuss their implications.
- Address any limitations or potential sources of bias.
- Compare your findings to existing literature.

Conclusion:

- Summarize the main findings and their significance.

- Suggest avenues for future research.

References:

- Cite all sources properly using the chosen citation style.
- Ensure consistency and accuracy in citations.

Appendices (if needed):

Include supplementary material that supports your research but is not essential to understand the main points.
